## **Comment on the Danish Financial Supervisory Authority's statement on the health and accident insurance area**

"We take note of the orders issued by the Danish FSA, and we fundamentally agree that improvements were needed in the area. The inspection in 2024 concerned our provisioning models in 2023, and since that time, we have initiated a number of measures to ensure that we balance the health and accident results by strengthening our internal processes and provisioning models, among other things. Consequently, we are in a different position today than we were in 2023, and we have already implemented a number of the measures required to comply with the orders issued by the Danish FSA. Danica's health and accident results have thus improved significantly in 2025 from the levels in 2024 and have also seen an increase over the first two quarters of 2025, which clearly reflects the measures taken. It is still a key ambition for Danica to ensure balanced health and accident results. In future, we will work determinedly to ensure such balance, and we take this work very seriously," says Christoffer Møllenbach, CFO of Danica.
