## Indicators for assessing systemically important banks

### 1. Introduction

The Basel Committee on Banking Supervision ("the Committee") has developed a methodology for identifying global systemically important banks (G-SIBs), based on the framework established by the Financial Stability Board (FSB). The BCBSs methodology applies an indicator-based measurement approach. The indicators are designed to reflect the different aspects of potential negative externalities of a bank's failure and its critical functions for the stability of the financial system. The European Banking Authority (EBA) has requested large institutions to disclose the indicators developed by the BCBS. Danske Bank is not considered a G-SIB, however with an overall exposure (Basel III leverage ratio exposure definition) exceeding EUR 200 billion, Danske Bank is required to disclose at least the 13 indicators on a consolidated basis. The indicators are presented below.

### 2. Principles for calculation of indicators

The data is prepared based on the definitions outlined in the Committee's standards for the end-2025 G-SIB assessment exercise. However, these definitions are subject to interpretation and may not be directly comparable with other disclosures by Danske Bank. Differences may also arise as there is a requirement to use the regulatory scope of consolidation which differs from the consolidation definition applied under IFRSs. The reporting period is the financial year ending 31 December 2025.
