Section D – Risks

Element	Title	
D.2	Key risks specific to the Issuer	In purchasing Securities, investors assume the risk that the Issuer may become insolvent or otherwise be unable to make all payments due in respect of the Securities. There is a wide range of factors which individually or together could result in the Issuer becoming unable to make all payments due in respect of the Securities. It is not possible to identify all such factors or to determine which factors are most likely to occur, as the Issuer may not be aware of all relevant factors and certain factors which it currently deems not to be material may become material as a result of the occurrence of events outside the Issuer's control. The Issuer has identified in the Base Prospectus a number of factors which could materially adversely affect its business and ability to make payments due under the Securities. These factors include:
		• the Group is exposed to a variety of risks, the most significant of which are credit risk, market risk, liquidity risk, operational risk, litigation and regulatory risk, insurance risk, pension risk and business risk;
		 regulatory changes could materially affect the Issuer's business;
		• the Issuer faces increased capital and liquidity requirements as a result of the framework implementing, among other things, the Basel Committee on Banking Supervision's proposals

		imposing stricter capital and liquidity requirements upon banks in the European Union;
		• the Issuer may be subject to bail-in under the BRRD;
		• the Group will have to pay additional amounts under resolution funds and deposit guarantee schemes; and
		• the Group may be affected by general economic and geopolitical conditions.
D.6	Key information on key risks specific to the Securities	Issues of Securities involve a high degree of risk, including the risk of their expiring worthless. Investors in Securities should be prepared to sustain a loss of all or part of their investment.
		There are also risks associated with specific types of Securities, and with the Securities and the markets generally, including:
		• an active secondary market in respect of the Securities may never be established or may be illiquid and this would adversely affect the value at which an investor could sell its Securities;
		• if an investor holds Securities which are not denominated in the investor's home currency, it will be exposed to movements in exchange rates adversely affecting the value of its holding. In addition, the imposition of exchange controls in relation to any Securities could result in an investor not receiving payments on those Securities;
		• the market value of Securities will be influenced by factors separate to the creditworthiness of the Issuer;
		• credit ratings assigned to the Issuer or any of its debt or other securities may not reflect all the risks associated with an investment in Securities and may be lowered, withdrawn or not maintained;
		• the Issuer is exposed to changing methodology by rating agencies; and
		• the Securities may not be a suitable investment for all investors.
		There are also risks related to the structure of a particular issue of Securities, general risks related to a particular issue of Securities and risks related to Securities generally, including:
		• risks relating to Securities linked to Reference Items;
		• [Open Ended Securities do not have a pre-defined expiration date and the Securities will only be terminated and cash settlement amounts in respect of the Securities paid on a day determined at the discretion of the Issuer;]
		• payments of cash amounts in respect of [Index/Futures/Equity]-Linked Securities may be made at different times than expected;
		• [the terms of the Securities may be subject to adjustment or the Securities may be cancelled upon the occurrence of any additional disruption events;]

• the Issuer may cancel Securities of a particular Series in the case of illegality in relation to its obligations under such Series of Securities;
• [the value of a Security may be affected by a change in currency exchange rates;]
• [the price of a [Turbo] Call Warrant or a [Turbo] Put Warrant will be influenced by changes in the value of the Reference Items(s) linked to such Security;]
• [the price of a Certificate Up or a Certificate Down may be affected by changes in the value of the relevant Reference Item(s) linked to such Security;]
• [the price of a Covered Call Certificate will follow changes in the value of the relevant Reference Item(s) linked to such Security until a certain level is reached;]
• [the price of a Certificate Bull or a Certificate Bear will be affected by changes in the value of the relevant Reference Item linked to such Security;]
• [the price of a Mini-Future Certificate Long or a Mini-Future Certificate Short will be affected by changes in the value of the relevant Reference Item linked to such Security;]
• a Securityholder will not have any recourse under a Security to bring a claim against any Reference Item;
• the Issuer and/or any of its affiliates may enter into hedging arrangements which may affect the market price, liquidity or value of the Securities;
• there is a risk that conflicts of interest may arise between certain parties that may not be beneficial to a Securityholder;
• there may be certain circumstances in which the market maker is unable to fulfil its obligations which may make it impossible for an investor to buy or sell the relevant Securities;
• if the cash settlement amount is equal to or less than the minimum cash settlement amount, no cash settlement amount shall be paid;
• because the Securities are dematerialised securities, investors will have to rely on the clearing system procedures for transfer, payment and communication with the Issuer;
• the terms and conditions of the Securities contain provisions which may permit their modification without the consent of all investors
• the value of the Securities could be adversely affected by a change in law or administrative practice;
