Rating	Explanation
Moody's: Aa3	Obligations rated Aa are judged to be of high quality and are subject to very low credit risk. Moody's appends numerical modifiers 1, 2 and 3 to each generic rating classification. The modifier 3 indicates a ranking in the lower end of that generic rating category.
Standard & Poor's: A	The obligor has strong capacity to meet its financial commitments, but is somewhat more susceptible to the adverse effect of changes in circumstances and economic conditions than obligors in higher-rated categories.
Fitch: A+	"High credit quality", 'A+' ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong, but may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

ANNEX 1

(this Appendix forms part of the Final Terms to which it is attached)

I. Commodity-Linked Redemption Amount

Unless previously redeemed or purchased and cancelled as provided in the Conditions, each nominal amount of the Notes equal to the Calculation Amount will be redeemed on the Maturity Date at an amount determined by the Calculation Agent in accordance with the below formula:

$$\text{Commodity-Linked Redemption Amount} = \text{Calculation Amount} \times (100\% + \text{MAX}[-20\%; \text{MIN}(\text{Cap}; \frac{\text{Index Final}}{\text{Index Initial}} - 1)])$$

Where

Cap:	means 78.50 per cent being a maximum return of 78.50 per cent for the Index.
Commodity Reference Price:	The price for a Pricing Date will be that day's Specified Price for the Dow Jones-UBS Commodity Index SM , stated in U.S. Dollars, published by Dow Jones & Company, Inc. or its successor, and UBS AG or its successor, and displayed on Reuters Screen page "DJUBS" that displays prices effective on that Pricing Date.
Index Initial:	means the Relevant Price on the Strike Date
Index Final:	means the Relevant Price on the Valuation Date
Pricing Date(s):	means each of the Strike Date and the Valuation Date subject to any Market Disruption Event.
Relevant Price:	means the Commodity Reference Price subject to Adjustment to the Commodity Reference Price
Specified Price:	means the final settlement price
Strike Date:	means 10 May 2010, provided however that if the Strike Date is not a Trading Day, then that date will be the next following Trading Day; and provided further that if such next following Trading Day would occur in the following calendar month, that date shall be the immediately preceding Trading Day.
Trading Day	Means a day when the exchanges of all futures contract included in the Commodity Reference Price are open for trading.
Valuation Date:	means 26 April 2013, provided however that if the Valuation Date is not a Trading Day, then that date will be the next following Trading Day; and provided further that if such next following Trading Day would occur in the following calendar month, that date shall be the immediately preceding Trading Day
Market Disruption Event	Means the occurrence on any day or any number of consecutive days of any one or more of the following circumstances as determined by the Calculation Agent: <ul style="list-style-type: none">(i) a failure by the applicable exchange or other price source to announce or publish (a) the final settlement price for the Commodity Reference Price or (b) closing price for any futures contract included as a component in the Commodity Reference Price;(ii) a material limitation, suspension, or disruption of trading in one or more of the futures contracts included as a component in the Commodity Reference Price; or(iii) the closing price for any futures contract included as a component in the Commodity Reference Price is a "limit price" (which means that the closing price for such contract for a day has increased or decreased from the previous day's closing price by the maximum amount permitted under applicable exchange rules).

Disruption Fallback

Means the following fallback determination mechanism for the Commodity Reference Price:

- (i) with respect to each futures contract included in the Commodity Reference Price which is not affected by the Market Disruption Event, the Relevant Price will be based on the closing prices of each such contract on the applicable determination date;
- (ii) with respect to each futures contract included in the Commodity Reference Price which is affected by the Market Disruption Event, the Relevant Price will be based on the closing prices of each such contract on the first day following the applicable determination date on which no Market Disruption Event is occurring with respect to such contract;
- (iii) subject to Clause (iv) below, the Calculation Agent shall determine the Relevant Price by reference to the closing prices determined in Clauses (i) and (ii) above using the then-current method for calculating the Relevant Price; and
- (iv) where a Market Disruption Event with respect to one or more futures contracts included in the Commodity Reference Price continues to exist (measured from and including the first day following the applicable determination date) for five (5) consecutive Trading Days, the Calculation Agent shall determine the Relevant Price in good faith and in a commercially reasonable manner.

Adjustment to the Commodity Reference Price:

1. If the Commodity Reference Price is permanently cancelled or is not calculated and announced by Dow Jones & Company, Inc., UBS AG or any of their affiliates (the "Sponsor") but (i) is calculated and announced by a successor sponsor (the "Successor Sponsor") acceptable to the Calculation Agent, or (ii) replaced by a successor index (the "Successor Commodity Reference Price") using, in the determination of the Calculation Agent, the same or a substantially similar formula for and method of calculation as used in the calculation of the Relevant Price, then the Relevant Price will be deemed to be the price so calculated and announced by that Successor Sponsor or that Successor Commodity Reference Price, as the case may be. The Calculation Agent shall inform the Counterparty promptly after the Calculation Agent determines that the Relevant Price will be deemed to be the price so calculated and announced by that Successor Sponsor or that Successor Commodity Reference Price, as the case may be.
2. If (i) the Sponsor makes a material change in the formula for or the method of calculating the Relevant Price or in any other way materially modifies the Commodity Reference Price (other than a modification prescribed in that formula or method to maintain the Relevant Price in the event of changes in constituent commodities and weightings and other routine events), or (ii) if the Sponsor permanently cancels the Commodity Reference Price or (iii) fails to calculate and announce the Relevant Price for a continuous period of 3 Trading Days and such failure is continuing on the Valuation Date and the Calculation Agent determines that there is no Successor Sponsor or Successor Commodity Reference Price, then the Calculation Agent may at its option (in the case of (i)) and shall (in the case of (ii) and (iii)) (such events (i) (ii) & (iii) to be collectively referred to as "Commodity Reference Price Disruption Events") calculate the Relevant Price using, in lieu of the published level for that Commodity Reference Price (if any), the level for that Commodity Reference Price as at the relevant determination date as determined by the Calculation Agent in accordance with the formula for and method of calculating that Relevant Price last in effect prior to the relevant Commodity Reference Price Disruption Event

(as the case may be), but using only those futures contracts that comprised that Commodity Reference Price immediately prior to the relevant Commodity Reference Price Disruption Event (as the case may be) (other than those futures contracts that have ceased to be listed on any relevant exchange). The Calculation Agent shall inform the Counterparty promptly after the Calculation Agent becomes aware of such Commodity Reference Price Disruption Event occurring, and in the case of such Commodity Reference Price Disruption Event (i) above, whether or not it intends to exercise such option.

Correction of
Commodity Reference
Price

Means that any correction of the Commodity Reference Price which is utilised for any calculation or determination made under these Notes is subsequently corrected and the correction is published by the Index Sponsor within 3 Business Days after the original publication, the Calculation Agent will determine the Commodity-Linked Redemption Amount as a result of that correction.

The Commodity-Linked Redemption Amount per Note may be less than the Calculation Amount but never be less than 80 per cent of the Calculation Amount on the Maturity Date.

The table below shows by way of example the development in the payout in respect of the Notes depending on the performance of the Commodity Reference Price (specified as Underlying Index in the table), assuming an Cap of 70 per cent. and a minimum Commodity-Linked Redemption Amount of 80 per cent.

Appendix 2

this Appendix forms part of the Final Terms to which it is attached

1. The underlying Index

The Dow Jones-UBS Commodity IndexSM is composed of futures contracts on physical commodities. Unlike equities, which typically entitle the holder to a continuing stake in a corporation, commodity futures contracts normally specify a certain date for the delivery of the underlying physical commodity. In order to avoid the delivery process and maintain a long futures position, nearby contracts must be sold and contracts that have not yet reached the delivery period must be purchased. This process is known as "rolling" a futures position.

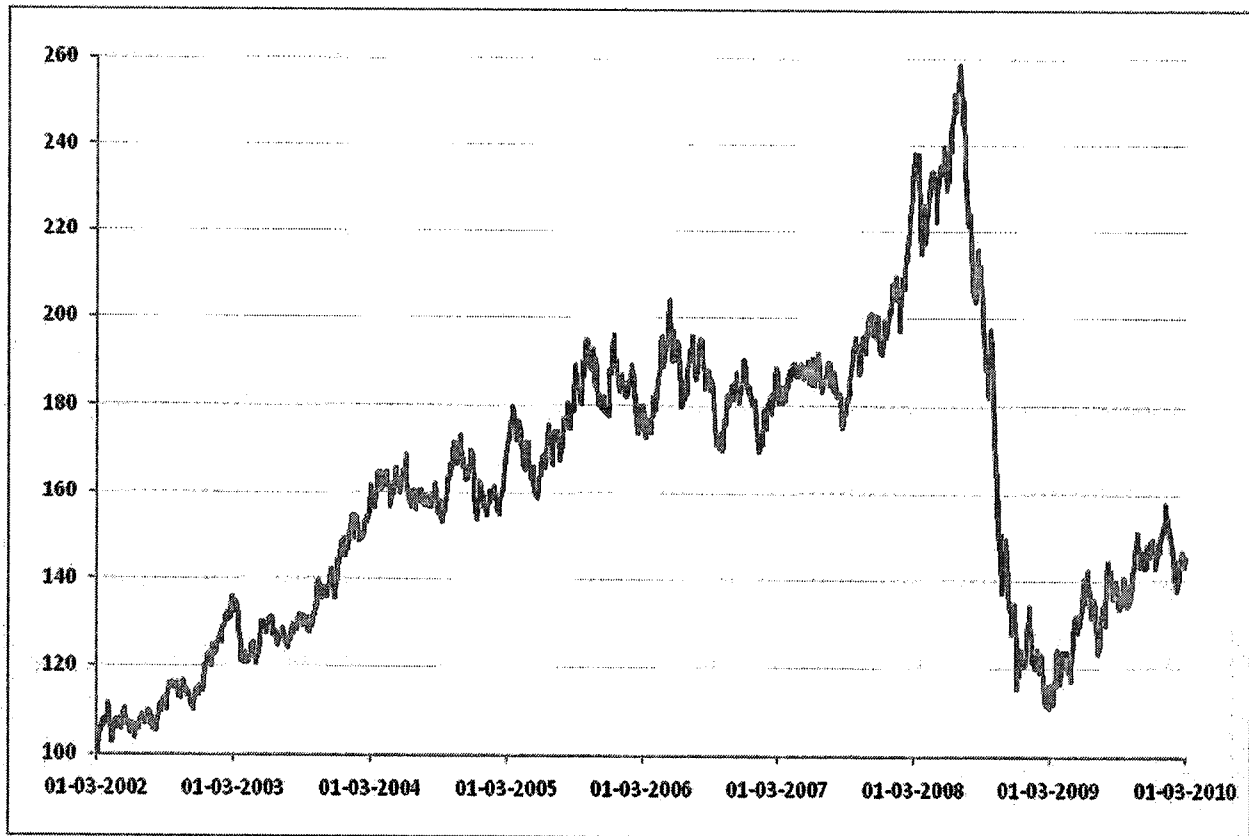

The Dow Jones-UBS Commodity IndexSM is composed of commodities traded on US exchanges, with the exception of aluminium, nickel and zinc, which trade on the London Metal Exchange (LME). Trading hours for the US commodity exchanges are between 8:00 AM and 3:00 PM ET. A daily settlement price for the index is published at approximately 5:00 PM ET.

The Dow Jones-UBS Commodity IndexSM is calculated on an excess return basis, meaning that the index reflects the return of underlying commodity futures price movements only.

The graph below shows the historical performance of the underlying Dow Jones-UBS Commodity IndexSM from 1 March 2002 (=index 100) up to and including 1 March 2010 without taking the Cap into consideration.

Back-testing:

The graph below shows how the percentage yield of a commodity-linked note with the same Underlying Index and same structure would have performed if it had been issued historically. The dates on the X-axis illustrates the expiry date of a 3 year structure and the Y-axis shows the yield over 3 years.

The graph is based on a structure with a Cap of 70%, a minimum redemption price of 80% and an issue price of 105%.
